FIREBIRD SQL

The database for the new millennium

QUICK REFERENCE CARD VERSION 3.0.0

Elementary datatypes

BIGINT Signed 64 bit integer (± 2E+63)

BLOB [SUB_TYPE t] <= 64K Bytes. Can hold CLOB's as well

BOOLEAN FALSE or TRUE

 $\begin{array}{lll} \text{CHAR}[(\text{n})] & <= 32.767 \text{ bytes. Fixed length char field} \\ \text{DATE} & \text{Date } (1\text{-jan-}100 \text{ upto } 29\text{-feb-}32768) \\ \text{DECIMAL}(\text{p,s}) & 16,32,64 \text{ bits. } (\text{p,s}) \text{ from } 1 \text{ upto } 18. \\ \text{DOUBLE PRECISION} & 64 \text{ bits, } 15 \text{ digits. } (\pm 2E\pm308) \\ \text{FLOAT} & 32 \text{ bits, } 7 \text{ digits. } (\pm 2E\pm38) \\ \end{array}$

INTEGER 32 bits. ±2147483647 NUMERIC(p,s) Alias for DECIMAL SMALLINT 16 bits. ±32767

TIME 64 bits, 0:00am to 23:59.9999 pm

TIMESTAMP 64 bits, DATE + TIME

VARCHAR[(m)] <= 32.767 chars. Size m is maxlength

CHAR and VARCHAR variants

CHARACTER [VARYING] [(m)]
NCHAR [VARYING][(m)]

NATIONAL CHAR (VARYING)[(m)]

NATIONAL CHARACTER [VARYING][(m)]

Constants

CURRENT_CONNECTION CUrrent database connection Date of current system clock

CURRENT_ROLE Current logged in role

CURRENT_SESSION Integer representing current session

CURRENT_TIME[(p)] Time of current system clock

CURRENT_TIMESTAMP[(p)] Timestamp of current system clock CURRENT_TRANSACTION_Integer representing glob, transaction

CURRENT USER See: USER

DELETING TRUE if we are in a delete trigger

GDSCODE Current native error code

INSERTING TRUE if we are in a insert trigger ROW COUNT Number of rows of last operation

SQLCODE Error code – CHAR(5) SQLSTATE Error code – CHAR(5)

UPDATING TRUE if we are in an update trigger

USER Currently logged in user

Literal constants

'normal string'
1234
Normal sQL String
123.45678
Normal floating point number
0x123AF
Normal hexadecimal number
x'0123BC'
Hexadecimal number string

DECLARE [VARIABLE] variable <type>;

Internal functions to be used in DML/DDL/Procedures

Numeric functions

ABS(<number>) Absolute value

ASCII_CHAR(<number>) Returns ASCII 0 <= n <= 255

ASCII VAL(<string>) Returns n

BIN AND(<number>[,...]) Bitwise AND of numbers BIN NOT(<number>) Bitwise NOT of number Bitwise OR of numbers BIN OR(<number [,...]) BIN SHL(<number>.<m>) Bitwise shift left m places BIN SHR(<number>.<m>) Bitwise shift right m places BIN XOR(<number>[,...]) Bitwise XOR of numbers CEIL(number) Integer ceiling of number CEILING(number) Integer ceiling of number EXP(<number>) Exponent from 'e'

FLOOR(<number>) Integer floor of number LN(<number>) Natural logarithm LOG(<number>.<base>) Logarithm of base LOG10(<number>) 10 Logarithm of number

Modulo of n/m MOD(< n>, < m>)PI() Returns 3.14... etc POWER(<number>,<pow>) Number to the <pow>er.

Random number RAND() ROUND(<number>[,<scale>])

SIGN(<number>) Returns -1, 0 or 1 SQRT(<number>) Square root of number

TRUNC(<number>[,<scale>]) Truncate number

String functions

BIT LENGTH(string) Returns number of bits CHAR LENGTH(string) Returns number of bytes

CHARACTER LENGTH(s) See char length HASH(<string>) Generate hash value

LEFT(<string>,<number>) Left <n> characters of string LOWER(string) Returns string in lowercase LPAD(<string>.<n>[.<str>]) Left padding of string

OCTET LENGTH(string) Returns number of bytes OVERLAY(str1 PLACING str2 FROM start [FOR length])

POSITION(<string> IN <string>) POSITION(<string>.<string>[.start]) REPLACE(<searched>,<find>,<replace>)

RIGHT(<string>,<number>) Rightmost number characters

RPAD(<string>,<number>[,<string>])

SUBSTRING(string FROM start [FOR length]

SUBSTRING(string [NOT] SIMULAR TO <pattern>

ESCAPE <char>)

TRIM([[BOTH|LEADING|TRAILING][string] FROM 1 string) UPPER(string) Returns string in uppercase

Generating functions

GEN ID(generator, step) Returns generated unique value GEN UUID() Generate a new 16 octet UUID

Conversional functions

CHAR_TO_UID(<string>) Conversion to 16 octets

CAST(expression AS type) Converts column to another type UUID TO CHAR(string)

16 octets to string

Logical functions

COALASCE(val,val,...) Returns the first non-NULL in list DECODE(<expression>,<search>,<result>,..,..<default>) IIF(condition,true,false) Returns true/false part condition NULLIF(val1.val2) Null if (val1 = val2), val1 otherwise NTH VALUE(expression.off) Nth (offset) value in expression

Select set functions

DENSE RANK() Dense ranking of a select FIRST VALUE(expression) First value in expression Lagging behind in select LAG(expr [,offset [,default]]) LAST VALUE(expression) Last value in expression LEAD(expr [,offset [,default]]) Leading value in expression

LIST(expression [, ...])

MAXVALUE(<value>[,...]) Max of all values MINVALUE(<value>[....]) Min of all values RANK() Ranking of a select ROW NUMBER() Row number of a select

Trigonometric functions

ACOS(<number>) Arc cosine

ACOSH(<number>) Arc cosine hyperbole

ASIN(<number>) Arc sine

ASINH(<number>) Arc sine hyperbole ATAN(<number>) Arc tangent $ATAN2(\langle n \rangle, \langle m \rangle)$ Arc tangent n/m ATANH(<number>) Arc tangent hyperbole COS(<number>) Cosine of number

COSH(<number>) Cosine hyperbolic of number COT(<number>) Cotangent = 1/ TAN(number)

SIN(<number>) Sinus

SINH(<number>) Sinus hyperbolic of arc

TAN(<number>) Tangent

TANH(<number>) Tangent hyperbolic of arc

Internal statistical functions

CORR(expr) Correlation coëfficient COVAR POP(expr) Covariance of population COVAR SAMP(expr) Covariance of sample STDDEV POP(expr) Population standard deviation STDDEV SAMP(expr) Sample Standard deviation

Population variance VAR POP(expr) VAR SAMP(expr) Sample variance

Special datetime functions

DATEADD(<number> <part> TO <time>) DATEADD(<part>, <number>, <time>) DATEDIFF(<part> FROM <time> TO <time>) DATEDIFF(<part>, <time>, <time>) EXTRACT(<part> FROM <time>)

YEAR | MONTH | WEEK | DAY | HOUR | <part>

MINUTE | SECOND

<time> DATE | TIME | TIMESTAMP

System context functions

RDB\$GET CONTEXT(n,var) Gets the context variable RDB\$SET_CONTEXT(n,var) Sets the context variable

N = Namespaces for context

SYSTEM System context -> see <sysvars> Users session, initially empty USER SESSION Users transaction, initially empty USER TRANSACTION

var = <sysvars>

DB NAME Full database path, or alias NETWORK PROTOCOL TCPv6. WNET. XNET or NULL

CLIENT ADDRESS Client's IP address CURRENT USER Same as the constant CURRENT ROLE Same as the constant

SESSION ID = CURRENT CONNECTION TRANSACTION ID = CURRENT TRANSACTION ISOLATION_LEVEL SNAPSHOT, CONSISTENCY or

'READ COMMITTED'

ENGINE VERSION Firebird version number

SIMULAR pattern rules in functions
